

## Project Ownership and Architecture

Please fill out the following form and return before the end of Sprint 1:

### Team #8

| Feature                    | Owner (Student Full Name) |
|----------------------------|---------------------------|
| Book Browsing and Sorting  | Carlos Pineres            |
| Book Details               | Jonathan Ramallo          |
| Profile Management         | Suzette Penton            |
| Shopping Cart              | Jacob Ramos               |
| Book Rating and Commenting | Julio Ponce               |
| Wish List Management       | David Parrado             |

### Architecture and Technology

Please describe what architecture you will use for your project.

The application should be a web application and has a common database where data is stored.

| Feature                         | Technology / Product |
|---------------------------------|----------------------|
| Business Layer / Rest API / MVC | Java                 |
| Database Backend                | MySQL                |

**Database:** Choose a backend to store your information. Popular choices are relational (MySQL, Sql Server) or NoSQL (Mongo DB, etc.)

**Business Layer / Rest API / MVC Framework:** Choose how your data will be served and routed to your client (WebAPI, .NET, Java, PHP, Spring)

Or Complete **Full Stack frameworks** (Django)

Describe the languages used for the different components.

| Languages |
|-----------|
| Java      |

Development IDE used in project: Visual Studios
